At Essentra Pipe Protection Technologies, when it comes to having the ultimate protection for your premium threads, we have you covered. Our Ultra® brand premium thread protectors feature CNC machined threads for an exact fit. Each protector is carefully and skillfully programmed to reach the greatest level of precision. Offering enhanced impact strength, Ultra thread protectors are formulated from all-plastic proprietary resins and can be tailored to your specific thread connection needs. This makes it an ideal thread protection solution for most premium thread connections on the market today.

Essentra's Ultra protectors are designed to comply with the current industry standards established by the American Petroleum Institute (API). Offering sufficient impact protection, the Ultra product line has been thoroughly tested to ensure compliance to the API 5CT, Annex I, 10th edition specification, offering you complete reassurance in your pipe's thread protection. If you require your premium threads to meet this standard's level of protection, you can depend on the reliability you get with Ultra protection.
